Free Energy

Denial by federal entity Page 1 of 4

This report is part of the ongoing reports of the National Officer In Charge regarding the relentless onslaught of crimes being committed by the federal entity against the American People. Here you'll see the representatives of the beast new world order attacking the well being of the American People at every possible turn. Read it. Your life and your nation are literally what's at stake.

FREE ENERGY IS HERE!

Free Energy Inventor Dennis Lee

Dennis Lee has survived an attack by government and the power companies to put him and his inventions out of business. He has been persecuted, forced out of business, losing millions of dollars, as well as jailed in his quest to bring free energy devices to the American household, making Americans free of the energy company monopolies. In 1986 in a Boston museum, where the American Revolution began, where John Adams and Ben Franklin called for America's freedom, he demonstrated the first light bulb to ever be lighted with his new energy system. He declared this event "America's Declaration of Energy Independence." His company, Better World Technology, is the recipient of the Inventor's Hall of Fame "Most Advanced Energy Technology Award." Mr. Lee is presently touring 34 cities across America demonstrating 24 "mind-boggling" new energy inventions, everything from jackhammers that run with no noise at all to Brown's gas machine that can weld with water. He is demonstrating on his tour how to make all of your electricity, heating and cooling at home at no operating cost. Soon you will be able to drive your

9/26/96*

automobile into one of the Better World Technology facilities, have an adjustment made and never use gasoline again! Your car engine will run with no gasoline, batteries or exhaust system. Mr. Lee appeared before Congress and the major energy companies in January of this year and offered to share his new technologies with them and with the American people. He was turned down. There was no interest. He demonstrates how nuclear power plants are no longer needed and shows how electricity can be produced on site at no operating cost anywhere in the world. As a result of Mr. Lee's efforts many other inventors in the U.S. are coming to the doors of Better World Technology to share their inventions. Hundreds of new inventions will soon be shared with the American public through Better World Technology as this is feasible, according to Mr. Lee. See the September schedule of FREE demonstration shows in various cities at the end of this interview, or write to Better World Technology, Route 23 North, Newfoundland, NJ 07435 for more information.

LE: Tell us about your background?

Dennis: Well, in the beginning, my wife and I had no interest in energy products. But we had a deep spiritual relationship with God. Our spiritual lives are more important to us than life itself. Then, we had a deep religious experience.

LE: What was that?

Dennis: We felt moved to go to Israel, and we wound up on Mt. Moses, asking God for help, telling him that we needed more guidance and direction to know what we were supposed to be doing. We had formed a corporation called Conserve Corporation, but this company was actually bankrupt. We were putting insulation in people's attics to make a living. When we got to Mt. Moses we were looking for major things to happen.

LE: What happened?

Dennis: We prayed and God said that he had already given us our provision...and it was our company, Conserve Corporation!

LE: Which was bankrupt?

Dennis: Yes. After going half way around the world, we were told that we already had our "provision." We had Conserve Corporation, which was bankrupt. But we also asked God for a "sign." And we got several of them on top of Mt. Moses.

LE: Which were?

Dennis: The main one was a cloud that formed in a cloudless sky and literally engulfed us on the top of the mountain. We were filled with all the colors of the rainbow shooting through this cloud. Then it suddenly took off

across the horizon, as if it was driven, and disappeared! We felt very happy, elated and thrilled that we'd heard from God, but we were confused because we were going home dead broke to a bankrupt company to somehow save the world!

LE: Were you doing energy work at that time?

Dennis: We were learning about solar panels and got involved in selling heat pumps. Jimmy Carter was throwing money away at that time on solar panels, so we rose to the challenge. We started pursuing energy and went further down the hole, but my wife and I couldn't quit because God had said this was our provision, so it was our provision.

LE: How did you turn things around?

Dennis: People were selling solar panels in malls with no sunlight to demonstrate them. So we got the idea that if you could somehow make a solar panel work when no one else's did, without sunlight, you could sell them. We got the bright idea to put heat pumps on the roofs where it's the hottest, and make them look like solar panels. Our heat pumps, instead of collecting solar energy, would work with a refrigerant inside our evaporator. And, we would capitalize on the second law of thermodynamics (hot goes to cold) and make our heat pump the coldest thing on the roof, therefore taking heat energy from everything...sun, sleet, rain, wind, snow twenty-four hours a day. We'd have a solar system that works in the middle of the night. We had no idea

that it would also be more efficient. Our system worked, although we didn't know how. We got an engineer to tell us how the thing worked and he said "it can't work," so we got rid of him. I finally figured it out for myself.

LE: So you finally became financially successful with Conserve Corporation?

Dennis: While everybody else kept talking about why our system wouldn't work I was out selling them to customers. I bought everybody out who owned a percentage of our company, and thousands of customers across the United States bought these units. I wound up in Seattle, Washington with my own factory building these things. Within an eighteen month period of time my personal net worth was fifty million dollars.

LE: What happened next?

Dennis: It turned out that I had built the world's most efficient heating system...so efficient that the amount of electricity used was saving 80% on everybody's electric bill who had our system. The electric companies were saying they wanted to conserve energy and we had the means to do this. I got my first big political lesson. The electric companies say one thing and mean another thing entirely different. Dennis: I had believed seriously in my patriotism and had gone and defended my country. I was disheartened to see the "good old boy" system up close. They tried to kill me and sent the attorney general to investigate my company.

LE: Your life was threatened?

Dennis: Yes. I had a body guard for awhile. They sabotaged my warehouse. The attorney general sent people into my office to steal our records. A girl in shipping was approached to give information to the government and she was eventually killed. After that, I got mad. I felt that if we live in America, we have the right to have justice. But, we couldn't even get the person arrested who killed the girl.

LE: You knew who the murderer was?

Dennis: Yes. So, we decided that our company, Conserve Corporation, was going to lead a war against the electric companies...to give to the American people an alternative to the monopolies in the U.S. We were going to dedicate our money, resources, intelligence and abilities to do this. I was frustrated and upset, and I saw that what was happening went to the governor's office and beyond. We announced to the public in the coliseum that if any scientists, or anybody knew how to create an alternative energy system, to come to us and we would use our money, engineers, research facilities and factory to build it and compete with the electric companies.

LE: That was quite a proposal.

Dennis: We wound up in a war with the electric utilities companies with them doing everything they could to stop us. They even had the Securities Exchange Commission boot me out of my own company. I owned 95% of the stock in the company and wasn't even allowed to vote at its annual election and annual stockholder's meeting. They walked in and took over the company and kicked me out of my own factory. So, I left Seattle with the shirt on my back, realizing that the next step was for them to find fifty pounds of heroin in the trunk of my car or something else that they'd planted. I said to myself, "I guess it's time to get out of here."

LE: So, you left Seattle?

Dennis: We went to Boston and stayed at a friend's house who is a professor at MIT. I was approached to rebuild

my company and the heat pumps. Then an interesting thing happened. I went to sleep one night and God gave me a vision. God gave me the answers for what we needed to do to make electricity. In essence, God was saying, "Here's how you do it. Get a pencil and paper and write this down. Don't take water that boils at 212 degrees (to make electricity). Take one of the refrigerants that boils at 100 degrees below zero. You'll get the substance just as excited as the electric companies get their substances excited at 1000 degrees." To make a long story short, I wound up developing a low-temperature phase change machine (to create electricity). And we put our first unit together and actually produced electricity in a little light bulb.

LE: What year was that?

Dennis: That was in 1986. We rented the Old South Museum in Boston, where the American Revolution began, in the same place where John Adams and Ben Franklin and later George Washington called for America's freedom. We demonstrated our first light bulb and we called it, "America's Declaration of Energy Independence." For the record, my name is Dennis Lee and my ancestor's name is Richard Henry Lee; he's the man in American history who called for America's "Declaration of Independence."

LE: This is quite an amazing story, Dennis. What did you do next?

Dennis: Well, my wife and I were sort of thinking this whole thing might not be such a great idea. We had gone from fifty million dollars net worth to nothing. And we had this bloody war and fight against the electric companies and even had them attempt to kill us. Now we had the ability to make free electricity and put the electric companies out of business. We only needed a good way to cool down our system. We went across the country spreading videotapes and raising capital...telling everybody who would listen to us of our plan. We met Mr. Victor Fisher, who came to see us at one of our demonstrations and he said, "Mr. Lee I am totally convinced that you have the best heating system in the world. I've got the most efficient heat engine in the world."

This was the engine we were attempting to build and he had already built it! So, we put the two together.

LE: What year was this?

Dennis: This happened at the end of 1987. We put the Fisher heat engine together with my heat pump and, at that point, we were able to revolutionize the entire world of energy. That made the government so nervous they couldn't see straight when I discussed this with them. They came and raided my research facility with thirteen armed sheriff's deputies. They took away every working prototype of every model I had. They said they had come to see if I was operating a marketing plan without registering with the state of California.

LE: What happened then?

Dennis: The government attempted to build a case against me to put me out of commission. The problem was they couldn't find anything that we had done wrong. After six months they ultimately decided that they would charge me with fraud...because "everybody says you can't make free electricity!" So, they arrested me for fraud! I had built a working model to prove beyond any shadow of a doubt that I could make free electricity. I

could have saved my life. He discovered that I had the arresting officer on the stand who had threatened him. He walked into court and said, "If this man's guilty of anything, I'm more guilty than he is. I built the units that are making free electricity."

LE: That is phenomenal!

Dennis: He told the judge that the officer on the witness stand told him he would kill him if he walked into a court of law. He told the officer, "Do you want to shoot me now...or take me out back and shoot me?" The whole thing immediately changed. I had a witness who was a world-class scientist, who could not only testify to the technology, but could also testify

to the gross prosecutorial misconduct.

LE: Dennis, this is an incredible story.

Dennis: Meanwhile, twenty-two witnesses who had also been threatened heard about the trial and decided to come forward also. These witnesses went on the stand and testified that they had been threatened by law enforcement officers as well. I had the father of the 747 airplane walk into court and testify that I could definitely take energy out of the air and make electricity for free. The father of the modern-day submarine testified the same way. Other technical experts said the same thing.

LE: So, what was the final result of all this?

Dennis: The judge finally called all of us into the back room and said, "Look. We're going to forget all this stuff...and dismiss these fraud charges and dismiss the criminal charges." I walked out of court a free man!
