From 
George Teso, Traffic Director

Reference

Subject City Council Order #7 Dated 6/30/91, Re: Pearl Street Traffic Study

The Traffic Department has completed its speed study of Pearl Street in the vicinity of Decatur Street and Lopez Street, as requested by the City Council. This information will be made part of the Pearl Street Traffic Study that was submitted to the City Council in June.

Enclosed are copies of the speed checks that were made during the morning and evening hours. During these periods, 384 vehicles were randomly checked for speed and compared with the rest of the street.

As you can see the average speed was 25 MPH and the 85 percentile speed which is the speed that is used for speed zoning was 30 MPH which is well within the limits of the law. However, we do know that most of the speeding is done during the late evening hours and we are forwarding this information to the police department for them to utilize.

We have checked the signing and replaced any worn or missing signs. This additional information agrees with our earlier study.
