

10

MEMORANDUM ON THE PROBLEM OF INTENTIONAL POISONING OF THE DRINKING WATER SUPPLY TO INDUCE BEHAVIOR MODIFICATION AND MENTAL AND PHYSICAL ILLNESSES AMONG THE PEOPLE OF THE CITY OF STOCKTON, CALIFORNIA.

September 18, 1981

President Ronald Reagan
The White House
Washington, D.C. 20500

Dear Mr. Reagan,

I would like to bring the following situation to your attention:

When one turns on the tap to get a drink of water, one probably notices that the water is clear and odor-free. But is the water clean? The answer is definitely not. The reason for this is that a system has been perfected by the governmental agencies by which every possible drop of waste (household, industrial and institutional) is collected within the district, the toxicity of the chemicals present in the waste enhanced many-fold (at the sewage plant) and then added to the drinking water supply.

The following is a very brief description of the whole situation:

HOW INDIVIDUALS ARE MADE TO CONTRIBUTE TO CONTAMINATION

IN BATHROOM: Through toilet commode. All the human waste, which also contains medication, drugs, additives, preservatives, germs and the toxins of all the sick and ill people are collected.

THROUGH SINK AND BATHTUB: All toothpaste, mouthwashes, shaving creams, cosmetics, soaps, shampoos, bubblebath products and various tub and sink cleansers (extremely toxic when taken internally) are collected.

KITCHEN SINK: Most of the burned and left-over foods, dishwashing, and oven cleaning chemicals (highly poisonous) as well as Drano, Liquid Plumber, etc., are collected. (In fact, if one would go to a general grocery store and a pharmacy store and check, one would conclude that practically all the consumable products end up in water).

INDUSTRIAL AND INSTITUTIONAL WASTE

Thousands of different chemicals are being used by various small businesses, hospitals, universities, science research, and industries (most of them potentially toxic when taken internally). All of these toxic chemicals end up in water. Water containing all the above mentioned wastes and toxic chemicals is taken to the waste water treatment plant (sewage plant).

THE ROLE OF SEWAGE PLANT AS A CENTER FOR GENERATING AND SPREADING ILLNESS-CAUSING CHEMICALS

In short, the processes the waste water is subjected to in the sewage plant are of two types:

1. To make the water appear clear (primary settling tank) and odor-free (trickling filters and secondary tanks); but still the water is not clean.
2. Dissolved chemicals are made more toxic (the introduction of the chlorine atom to less toxic chemicals makes those chemicals many times more toxic).

THE CRUCIAL LOCATION OF THE SEWAGE PLANT

The plant is so located that the toxic discharged water will do the very maximum damage to the drinking water supply. Look at your local map for the location of the sewage plant with respect to drinking water supply. Stockton's sewage plant discharges on the average 40,000 lbs. of toxic chemicals in Stockton Deep Water Channel every day. This toxic contaminated water is utilized as drinking water later on. This mixing of sewer and other toxic chemicals with the drinking water expresses the ultimate in criminal behavior.

EFFECTS OF THIS CHRONIC POISONING THROUGH DRINKING WATER

The concentrations of the toxins present in the drinking water are such that the impact will be primarily on the children and younger generation. The overall effect of these toxins on the total population could be observed by the following manifestations:

1. Most synthetic cleansing agents (ethers, chlorinated compounds, amines and alcohols, etc.) present in drinking water have a slow incapacitating effect on the human brain (mental depression, anxiety, etc.).
2. Hospital and medical costs will escalate (chemical-caused damage to the various organs of the body, e.g., cancer, heart related illnesses, neuromuscular problems, arthritis, kidney failure, etc.).
3. More people will become obese or allergic (body response to combat toxins and poisons)
4. Schools will experience general breakdown of discipline and lowering of student performance; in general, families will have more quarrels among members (chemical induced behavior modification).
5. Crime rate (criminal behavior) increases with increase of uncleanness (waste product in water. Normal behavior tends to change into cowardly, crooked or criminal behavior. In general, quality of water (amount of toxins) directly affects the quality of life (mental and physical health). As the amount of toxins increases in drinking water, so the quality of life deteriorates.

CRIMINAL MISAPPROPRIATION OF PUBLIC FUNDS

Of the \$100 billion (75% federal and 25% state and local) that were allotted under the Clean Water Act for construction of new third stage waste water treatment plants (tertiary treatment), Stockton received over \$50 million, but not a penny of that money has been used for that purpose (it may be that the entire \$100 billion nationwide has had the same fate). Senator John Garamendi of the 13th District, Stockton, California knows of these facts; but instead of bringing the matter to the public, he has chosen cowardly path of repressing and suppressing the matter.

I have documented proof and toxicology data to substantiate my above statements. I look forward to the opportunity to share this information with you.

Respectfully and with warm personal regards,

Dr. Ram Babu

Dear President Bush

A scientific research study of the last thirty years clearly shows that the United States Government has the single minded mission to make every American a genetically damaged person. This mission is being accomplished by using sewage plants (wastewater treatment plants) as centers for introducing toxins into the drinking water supplies. Water being the main component of all living things thereby it contaminates the entire food chain. Some of these toxins interfere in the cell cycle machinery, contributing to both uncontrolled cell growth and genetic instability.

Every President of the United States after Richard Nixon has been deeply involved in this mission. One can evaluate the legacy of a President by the diseases, that were created, introduced, and promoted during his administration, for example, Ronald Reagan - Aids

Here are two examples of U.S. Goernment's sinister conduct of saying one thing and meaning the complete opposite:

Prosperity: Means creating a nation of overweight and obese people(genetically damaged people). Presently over 60 % of Americans are overweight and one in seven obese(body becomes a giant tumor). And also there are a large number of chronic diseases and abnormalities resulting in a population of precarious and disabled people, who are totally dependent on medication to live.

Energy Efficient : Means designing and constructing classrooms in schools, and other buildings, to create an oxygen gas deficiency, thereby causing people, who use these rooms to suffer damage to cognitive function.

I have documented proof and toxicology data to substantiate my above statements. I look forward to the opportunity to share this information with you.

Sincerely

Dr. Ram Babu

Communication #10

A communication was received from Dr. Ram Babu, regarding a scientific research study on toxins in the drinking water supplies.

In City Council March 17, 2003

PLACED ON FILE.
